

Procurements of innovative, advanced systems to support **security in public transport**

Prevent PCP focuses on augmenting the security in public transport by developing an innovative solution enhancing security situational awareness which would timely detect unattended items, associate and track the perpetrators and provide a crisis management system.

With no existing solution addressing that need, Prevent PCP is a research and development project hoping to fill the void. Funding shall be made available through an innovative public tender procedure: **Pre-Commercial Procurement.**

OPEN MARKET CONSULTATION

19-20 JANUARY 2022
MARSEILLE AND ONLINE

The Open Market Consultation is a crucial event for the consortium: input from economic operators and solution developers shall allow to fine-tune its public tender, making it as close as possible to the market capacities.

Join us on January **19th (13:30)** and **20th (9:00)** 2022, either online or onsite in Marseille (France), to share your experience and network with companies from across Europe.

Join

In addition to the meeting, information national webinars will take place up from January 10th 2022.

We will answer all your questions during this series of interactive events:

How can you get involved in the project?

What are the technical requirements to address the identified need?

Which funding shall cover R&D expenses?

Under which condition can your project get supported?

Companies looking for partnerships will also present their technologies to address that challenge.

Find out more about the national information webinars!
